

29 October 2014

QUARTERLY REPORT – 30 September 2014

Please find attached the Quarterly Activities Report and Appendix 5B for the period ended 30 September 2014.

Yours faithfully
Cape Lambert Resources Limited

Tony Sage
Executive Chairman

Cape Lambert Resources Limited (ASX: CFE) is a fully funded mineral development company with exposure to iron ore, copper, gold, uranium, manganese, lithium and lead-silver-zinc assets in Australia, Europe, Africa and South America.

Australian Securities Exchange Code: CFE

HIGHLIGHTS

Corporate

- At 30 September 2014, the Company had approximately A\$58.1 million in cash at bank.
- Settlement with MCC reached whereby Cape Lambert received \$51.6m cash.
- Cape Lambert reaches out of court settlement with the ATO regarding \$96m notice of amended assessment received in 2012 whereby the Company makes a final payment to the ATO of \$2.4m in full and final settlement.
- Following the successful settlements with MCC and the ATO, Cape Lambert declares the payment of a 4cps fully franked dividend payable in two equal tranches.
- Buy back continues with 8,041,271 fully paid ordinary shares bought back in the quarter.

Post Quarter end:

- Cape Lambert negotiated a US\$20 million financing agreement to Timis Mining to fund its acquisition of the London Mining Marampa mine which includes:
 - US\$8 million 12 month bridging loan; and
 - US\$12 million royalty purchase
- Cape Lambert will receive US\$2/t royalty for 4 years from iron concentrate exported from Timis Mining Marampa mine to provide Cape Lambert with a royalty stream of potentially up to US\$56 million
- Timis Mining will have exclusive rights to mine and acquire 100Mt of oxide material from Cape Lambert's Sierra Leone Projects at a price of US\$3 to US\$5/t, potentially earning US\$300 to US\$500 million for the Company.

Projects

Marampa Iron Ore Project – Sierra Leone

- Post Quarter end, a Large Scale Mining Licence application for Marampa was approved, subject to the Company agreeing to accept the proposed licence and making payment of the annual mining licence fee.
- Following the grant of the mining licence, the Company will commence the negotiation of the associated mine lease agreement that sets out the terms and conditions under which the Company would operate the large scale mine, which is expected to take 6 to 9 months to finalise.

Rokel Iron Ore Project – Sierra Leone

- Magnetite prospects – significant assays:
 - Makonkari – MKGR102: 49.6% Fe (magnetite gneiss);
 - Makonkari – MKGR103: 57.2% Fe (magnetite gneiss);
 - Makonkari – MKGR106: 50.3% Fe (magnetite gneiss).

Gold Prospects – Cote D'Ivoire

- Aeromagnetic surveys completed across all three Exploration Tenements with ground mapping and drilling targets to be identified.

CORPORATE

Strategy and Business Model

Cape Lambert Resources Limited (**ASX: CFE**) (**Cape Lambert** or the **Company**) is an Australian domiciled, fully funded, mineral development company. Cape Lambert has interests in several exploration and mining companies, providing exposure to iron ore, copper, gold, uranium, manganese, lithium and lead-silver-zinc assets in Australia, Asia, Europe, Africa and South America (refer Figure 1).

Cape Lambert's strategy is to acquire and invest in undervalued and/or distressed mineral assets and companies (**Projects**) and:

- improve the value of these Projects, through a hands on approach to management, exploration, evaluation and development; and
- retain long-term exposure to these Projects through a production royalty and/or equity interest.

Cape Lambert aims to deliver Shareholder value by adding value to these undeveloped Projects. If Projects are converted into cash, the Company intends to follow a policy of distributing surplus cash to Shareholders.

Capital Management

Dividend Payment

On 8 August 2014, following the successful settlements with the Australian Taxation Office and the Metallurgical Corporation of China Limited, the Company announced the payment of 4cps in fully franked dividends.

The payment of the first fully franked dividend of 2cps will be made on 31 October 2014 and the payment of the second fully franked dividend of 2cps will be made on 27 February 2015.

On Market Buy-Back

During the quarter, the Company continued with its on market share buy-back of up to 10% of the Company's fully paid ordinary shares (**Shares**) within the 12 months from 23 January 2014. Shares bought back by the Company are subsequently cancelled.

During the quarter, the Company bought back 8,041,271 Shares for total consideration of A\$899,527.37. As at 29 October 2014, there are 25,541,587 Shares remaining that may be bought back under this facility.

Investments and Divestments

Timis Mining Corporation Finance Agreement

Post Quarter end, the Company announced (Refer ASX Announcement 22 October 2014) that it had entered into a binding terms sheet with Timis Mining Corporation SL Limited and Timis Mining Corporation Limited (collectively **Timis Mining**) to provide financing of US\$20 million to assist Timis Mining with its acquisition of the Marampa Iron Ore Mine (**Mine**) in Sierra Leone from the administrator of London Mining PLC (**London Mining**) (**Agreement**).

The Agreement is divided into two parts including:

- (a) US\$8 million **Bridging Finance**; and
- (b) US\$12 million for purchase of a royalty (**Royalty Purchase**).

Bridging Finance

The US\$8 million Bridging Finance is repayable in 12 months and incurs interest of 3 month US LIBOR + 6%.

The principal and interest will be repaid to Cape Lambert in one payment at the expiry of the 12 month loan period and can be extended by the parties on mutually agreed terms.

Royalty Purchase

The Company negotiated the purchase of a royalty for US\$12 million with Timis Mining in exchange for a US\$2 per tonne of iron concentrate exported from the Mine (**Royalty**).

The Royalty is payable on a quarterly basis and will commence from the first shipment of concentrate from the Mine following the completion of the acquisition of the Mine by Timis Mining from the administrator of London Mining.

The Royalty will be payable over a four year period and in the event the Mine temporarily suspends production for a force majeure event, the Royalty period will be extended by the same period that the force majeure event continues.

Exclusive Rights to Acquire Cape Lambert's Oxide Material

Cape Lambert has also negotiated the sale of oxide material from its Sierra Leone Projects to Timis Mining. Under the terms of the Agreement, Timis Mining will have exclusive rights to purchase 100 million tonnes of oxide material, or such greater amount as defined by further drilling from Cape Lambert's adjacent Sierra Leone Projects.

The price at which the oxide material will be purchased from Cape Lambert is expected to be in the range of US\$3 to US\$5 per metric tonne.

A drilling campaign to increase the upside of Cape Lambert's oxide resources is planned to begin 12 months after Timis Mining commences mining at Cape Lambert's Sierra Leone Projects. This drilling campaign, together with any costs associated with mining operations, will be borne by Timis Mining and not Cape Lambert.

Rights to Match

Timis Mining may sell its interest in its Mine and Cape Lambert can sell its oxide material at any time during the period of this agreement. In the event that Timis Mining sells the mine, then it will use its reasonable endeavours to incorporate the sale of Cape Lambert's Sierra Leone Projects at the same time.

Should the mine be sold without a sale of Cape Lambert's Sierra Leone Projects, then the Royalty and Bridging Finance obligations continue with any new third party owner and the new third party owner will be obligated to purchase the oxide material on the same basis as agreed between the parties.

Should Cape Lambert sell its Sierra Leone Projects without a sale of Timis Mining's mine, then the Royalty and Bridging Finance obligations continue with any new third party owner of Cape Lambert's Sierra Leone Projects and the new third party owner will be obligated to sell the oxide material to Timis Mining on the same basis as agreed between the parties.

Legal Action and Disputes

MCC Legal Action

As announced on 14 July 2014, the Company reached settlement with the Metallurgical Corporation of China Limited over the final A\$80 million payment from the sale of the Cape Lambert magnetite project.

On 8 September 2010, Cape Lambert announced that it had commenced legal action against MCC Australia Sanjin Mining Pty Ltd (**MCC Sanjin**), and its parent company Metallurgical Corporation of China Limited (collectively **MCC**) to recover the final A\$80 million payment from the sale of the Cape Lambert magnetite project in mid-2008 pursuant to an agreement between the parties (**MCC Agreement**). In accordance with the terms of the MCC Agreement, Cape Lambert received payments totalling A\$320 million in 2008, with the final payment due on the grant of mining approvals, or if MCC had not used its reasonable endeavours to procure the mining approvals within two years.

Legal proceedings were instigated in the Supreme Court of Western Australia after discussions between MCC and Cape Lambert to resolve the non-payment proved unsuccessful.

In March 2013, the Court made orders, inter alia, for the dispute to be determined by an arbitrator in Singapore and for the Company to propose (such proposal to be consented to by the MCC parties) that the dispute between the Company and MCC (in respect to the payment of A\$80 million into an escrow account pending determination of the primary dispute) (**Escrow Dispute**) be heard and determined by the arbitrator prior to the hearing of the disputes between the Company and MCC.

The Company referred the dispute to arbitration in Singapore and in June 2013 a hearing was held by the Arbitrator to determine the Escrow Dispute. The Arbitrator ordered that MCC pay the disputed amount of A\$80 million into an escrow account in the joint names of the Company and MCC pending the determination of the substantive dispute. The amount was paid into the escrow account on 25 November 2013.

The substantive legal matter was due to be heard in Singapore commencing in July 2014. In July 2014, the Company and MCC reached an out of court settlement. Under the terms of the settlement, the escrow agent was ordered to release the funds held in escrow with A\$30 million payable to MCC and the balance of A\$51.6 million, which included accrued interest, to Cape Lambert. The funds were received by the Company on 17 July 2014.

ATO Notice of Amended Tax Assessment

As announced on 1 August 2014, the Company reached an out of court settlement with the Australian Taxation Office (**ATO**).

The Company was subject to an audit from the ATO on its income tax return for the 2009 year. Following the conclusion of this audit, in May 2012 a notice of assessment was issued for additional income taxes payable together with interest and associated penalties

(Amended Assessment). The Amended Assessment totalled \$95,787,254 which comprised \$57,642,715 of additional income taxes payable with respect to the 2009 income tax year, \$28,821,357 in penalties and \$9,323,182 in interest charges.

On 11 December 2012 the Company announced that following discussions with the ATO it had agreed to an Arrangement for Payment (**Arrangement**) of half the primary tax and shortfall interest charge assessed pending the outcome of the objections lodged by the Company. Under this Arrangement the Company paid to the ATO an amount of \$33,395,426. On 26 February 2014 the Company announced that the objections lodged with the ATO in relation to the Amended Assessment were disallowed.

In July 2014, the Company and the ATO reached an out of court settlement. Under the terms of the settlement, the Company has, on a without admission of liability basis, made a final payment to the ATO of \$2,465,106 (**Settlement Payment**) following the issue of further amended assessments. This represents full and final settlement and removes the potential for any further payments to the ATO under the Amended Assessment issued in 2012.

PROJECTS

Marampa (100% interest)

Marampa is an iron ore project at development and permitting stage, and is located 90 km northeast of Freetown, Sierra Leone, West Africa (**Marampa** or **Marampa Project**) (refer Figure 2). Marampa comprises two granted exploration licences (EL46A/2011 – 239.18 km² and EL46B/2011 – 66.00 km² (formerly EL46/2011 – 305.18 km²)) held by Marampa Iron Ore (SL) Limited, which is indirectly, a wholly owned subsidiary of Cape Lambert.

Marampa has a total JORC Mineral Resource of 681 million tonnes¹ (**Mt**) at 28.2% Fe (above a cut-off grade of 15% Fe) covering four deposits (Gafal, Matukia, Mafuri and Rotret) (refer ASX Announcement 7 July 2011).

Exploration

No exploration activities occurred during the quarter.

Topographic Surveying

Topographic surveying continued with completion of the farms in the planned railway yard area. Crop counting continued to allow assessment for compensation requirements.

Mining Licence

On 15 October 2014, the Company received a notice from the Ministry of Mineral Resources (**MoMR**) that its Large Scale Mining Licence application lodged late in 2013 was approved, subject to the Company notifying the MoMR of its willingness to accept the proposed licence and making payment of the annual mining licence fee. The Company plans to accept the proposed mining licence and make payment of the fee.

Following the grant of the mining licence, the Company will commence the negotiation of the associated mine lease agreement that sets out the terms and conditions under which the Company would operate the large scale mine, which is expected to take 6 to 9 months to finalise.

Dempsey Resources (100% interest)

Dempsey Resources holds the Kukuna Iron Ore Project located in Sierra Leone (**Kukuna** or **Kukuna Project**).

The Project is located 120 km northeast of Freetown in the northwest of Sierra Leone and consists of one exploration licence (EL22/2012) covering 68 km² (refer Figure 2). The licence is located 70 km due north of the Marampa Project and the Pepel Infrastructure and comprises rocks that correlate with the Marampa Group stratigraphy known to host specular hematite mineralisation.

The Kukuna project is currently under care and maintenance. The Company is maintaining the camp as a base for exploration activities in and around the district.

¹ This information was prepared and first disclosed under the JORC Code 2004. It has not been updated since to comply with the JORC Code 2012 on the basis that the information has not materially changed since it was last reported.

Metal Exploration Limited (100% interest)

Metal Exploration (Mauritius) Limited, a wholly owned subsidiary of Cape Lambert, holds 17 granted exploration licences and one application in Sierra Leone covering approximately 2,386 km². This land package covers the region 70 km to the north and south of Marampa and is referred to as the Rokel Iron Ore Project (**Rokel** or **Rokel Project**). Rocks from the Marampa Group exist throughout the licence areas, much the same as the Marampa Project, and are known to host specularite schist bearing units.

The Rokel Project is prospective for discovery of hematite schist deposits geologically similar to those at Marampa and is located proximal to the existing Pepel infrastructure (refer Figure 3). Regional mapping and geophysics has identified a number of prospective areas which are progressively being followed up with targeted exploration.

Exploration

Mapping and rock chip sampling was completed in the Magbosi and Makonkari licences over the magnetite targets and moved north into the Lankono licence area. Outcrops of magnetite gneiss, granitic gneiss containing magnetite and magnetite rich laterites continue to be discovered. Several samples have been collected and will be sent for preparation and assay in due course.

Exploration activities on the extensions to the eastern hematite targets progressed with numerous pits and short trenches excavated during the quarter. Reconnaissance mapping moved into the northern leases to test extensions to the known mineralisation in the Kukuna district. Observation of hematite schist float is more extensive to the north of Kukuna with little or no hematite schistose rocks identified in the south. A series of pits are planned to try and identify any in-situ mineralisation that may exist.

Sampling

Assay results were received during the quarter for rock chips taken from the magnetite target areas. See Figure 4 for a plan of rock chip assay locations and Tables 1 and 2 for all assays received during the quarter. The following significant rock chip assays were received:

- MKGR102: 49.6% Fe;
- MKGR103: 57.2% Fe; and
- MKGR106: 50.3% Fe.

These results were returned from samples logged as magnetite gneiss. The results will be followed up to determine if they are from isolated surface enrichment or are part of a more pervasive enriched iron zone.

Cote D'Ivoire (100% interest)

Metals Exploration Cote D'Ivoire SA Limited is a wholly owned subsidiary of Cape Lambert Resources. The Company holds three tenements in the highly prospective Birimian Gold Belt of Cote D'Ivoire. The tenements are named Boundiali North (400km²), Katiola (400km²) and Bouake (400km²) for a total land position of 1,200km² (refer Figure 5).

The tenements all contain, or are adjacent to, Birimian Greenstones and metasediments and have significant structural characteristics known to host high tenor gold mineralisation in the

district. The Birimian Group is broadly divided into phyllites, tuffs and greywackes of the Lower Birimian (Type 2 metasediments), and various basaltic to andesitic lavas and volcanoclastics of the Upper Birimian (Type 1 Greenstone metavolcanics). Spatial distribution of gold mineralisation appears to be governed by north to northeast trending belts of metavolcanic rocks, ranging from 15 km to 40 km in width, associated with the Upper Birimian.

The Birimian Gold Belt is host to numerous multi-million ounce gold deposits including the Morila (7 Moz), Syama (7 Moz) and Tongon (4 Moz) deposits. Almost without exception, these major gold deposits are located at or close to the margins of the metavolcanic belts, adjacent to the strongly deformed contacts between the Upper and Lower Birimian sequences as seen to exist within the recently granted tenements.

All three tenements are highly prospective and have the potential to host multi-million ounce gold deposits (refer to ASX announcement of 30 April 2013).

Exploration

Airbourne geophysical and radiometric surveys over the three granted tenements were completed during the quarter. A draft report on the results has recently been received and is currently under review. Initial interpretation has indicated promising structural features, which will be investigated during a regional follow up mapping program planned for the December quarter.

Pinnacle (100% interest)

Pinnacle holds the Sandenia Iron Ore Project (**Sandenia** or **Sandenia Project**) located 290 km east of Conakry in the central south of the Republic of Guinea. The Project comprises a single tenement covering approximately 298 km². The Sandenia permit contains Banded Iron Formation prospective for iron mineralisation, similar to that hosting the 6.16 Bt Kalia deposit owned by Bellzone Mining plc located on the contiguous permit to the north.

The camp and facilities have been placed on care and maintenance and the Company is continuing to seek divestment opportunities for the project.

Mt Anketell Pty Ltd (100% interest)

Mt Anketell Pty Ltd (**Mt Anketell**), a wholly owned subsidiary of Cape Lambert, holds a single exploration licence (E47/1493) covering 56.9 km² in the northern Pilbara region of Western Australia, which is prospective for niche iron and gold mineralisation associated with the Nickol River precinct. Mt Anketell recently received a two year extension of the licence terms.

No exploration activities were conducted during the quarter. The Company has decided to divest Mt Anketell and buyers are being sought for this project.

Competent Person:

The contents of this Report relating to Exploration Results and Mineral Resources are based on information compiled by Olaf Frederickson, a Member of the Australasian Institute of Mining and Metallurgy. Mr Frederickson is a consultant to Cape Lambert and has sufficient experience relevant to the style of mineralisation and the deposit under consideration and to the activity he is undertaking to qualify as a Competent Person, as defined in the 2012 edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Mr Frederickson consents to the inclusion in this report of the matters compiled by him in the form and context in which they appear.

Table 3: Rokel Pit and Surface Sample JORC Information.

JORC Code, 2012 Edition – Table 1 Report

Section 1 Sampling Techniques and Data

(Criteria in this section apply to all succeeding sections.)

Criteria	JORC Code explanation	Commentary
Sampling techniques	<ul style="list-style-type: none"> Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling. Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used. Aspects of the determination of mineralisation that are Material to the Public Report. In cases where 'industry standard' work has been done this would be relatively simple (eg 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information. 	<ul style="list-style-type: none"> Cut channels within 1m x 1m x 2/3m hand excavated pits Random surface rock samples ~2kg samples taken from vertical channels by lithology. Samples sent to SGS operated lab in Lunsar for asmples prep and onto SGS analytical lab in Liberia for XRF determination.
Drilling techniques	<ul style="list-style-type: none"> Drill type (eg core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (eg core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc). 	<ul style="list-style-type: none"> No drilling Pit and random surface hand sampling.
Drill sample recovery	<ul style="list-style-type: none"> Method of recording and assessing core and chip sample recoveries and results assessed. Measures taken to maximise sample recovery and ensure representative nature of the samples. Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material. 	<ul style="list-style-type: none"> No drilling Samples recoverd manually by hand in approximately 2 kg. Sample bias likely due to unconscious preferential sampling inevitable in pit and rock chip sampling. Bias minimised in pits with vertical channel samples across entire lithologies.
Logging	<ul style="list-style-type: none"> Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies. Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography. The total length and percentage of the relevant intersections logged. 	<ul style="list-style-type: none"> Logging included a geological description of the rock type sampled The logging is entirely qualitative.
Sub-sampling techniques and sample preparation	<ul style="list-style-type: none"> If core, whether cut or sawn and whether quarter, half or all core taken. If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry. For all sample types, the nature, quality and appropriateness of the sample preparation technique. Quality control procedures adopted for all sub-sampling stages to maximise 	<ul style="list-style-type: none"> No sub samples taken No duplicate samples were taken at this preliminary stage of the project. The and sampling method is only indicative and not suitable for any resource definition work.

Criteria	JORC Code explanation	Commentary
	<p><i>representivity of samples.</i></p> <ul style="list-style-type: none"> Measures taken to ensure that the sampling is representative of the in situ material collected, including for instance results for field duplicate/second-half sampling. Whether sample sizes are appropriate to the grain size of the material being sampled. 	
Quality of assay data and laboratory tests	<ul style="list-style-type: none"> The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total. For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc. Nature of quality control procedures adopted (eg standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (ie lack of bias) and precision have been established. 	<ul style="list-style-type: none"> Assays done by SGS in Sierra Leone and Liberia for analysis by XRF Quality control procedures for the pit and rock chip assays were followed via internal SGS protocols.
Verification of sampling and assaying	<ul style="list-style-type: none"> The verification of significant intersections by either independent or alternative company personnel. The use of twinned holes. Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols. Discuss any adjustment to assay data. 	<ul style="list-style-type: none"> Lab repeats and lab standards used. No samples twinned. Primary assay data received from SGS labs in an excel spreadsheet and loaded into the company Datashed database.
Location of data points	<ul style="list-style-type: none"> Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation. Specification of the grid system used. Quality and adequacy of topographic control. 	<ul style="list-style-type: none"> Sample locations have been recorded on a handheld GPS.
Data spacing and distribution	<ul style="list-style-type: none"> Data spacing for reporting of Exploration Results. Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied. Whether sample compositing has been applied. 	<ul style="list-style-type: none"> Random data spacing based on outcrop
Orientation of data in relation to geological structure	<ul style="list-style-type: none"> Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type. If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material. 	<ul style="list-style-type: none"> Data based on outcrop occurrences. No particular sample orientation.
Sample security	<ul style="list-style-type: none"> The measures taken to ensure sample security. 	<ul style="list-style-type: none"> Chain of custody was managed by Cape Lambert Resources until samples were delivered to SGS Lunsar.
Audits or reviews	<ul style="list-style-type: none"> The results of any audits or reviews of sampling techniques and data. 	<ul style="list-style-type: none"> Not applicable at this stage due to the preliminary nature of the project.

Section 2 Reporting of Exploration Results

(Criteria listed in the preceding section also apply to this section.)

Criteria	JORC Code explanation	Commentary
Mineral tenement and land tenure status	<ul style="list-style-type: none"> Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings. The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area. 	<ul style="list-style-type: none"> All samples taken from the Rokel Project area held 100% by Metals Exploration which is a wholly owned subsidiary of Cape Lambert Resources. The tenements are in good standing.
Exploration done by other parties	<ul style="list-style-type: none"> Acknowledgment and appraisal of exploration by other parties. 	<ul style="list-style-type: none"> Unknown
Geology	<ul style="list-style-type: none"> Deposit type, geological setting and style of mineralisation. 	<ul style="list-style-type: none"> Specularite schist bearing units with the Marampa Group Rocks
Drill hole Information	<ul style="list-style-type: none"> A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes: <ul style="list-style-type: none"> easting and northing of the drill hole collar elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar dip and azimuth of the hole down hole length and interception depth hole length. If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case. 	<ul style="list-style-type: none"> See attached tables.
Data aggregation methods	<ul style="list-style-type: none"> In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually Material and should be stated. Where aggregate intercepts incorporate short lengths of high grade results and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail. The assumptions used for any reporting of metal equivalent values should be clearly stated. 	<ul style="list-style-type: none"> Assays were for a single samples over the full depth of each lithological layer within pits or as individual rock chips from surface samples. Some significant assays were returned.
Relationship between mineralisation widths and intercept lengths	<ul style="list-style-type: none"> These relationships are particularly important in the reporting of Exploration Results. If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported. If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (eg 'down hole length, true width not known'). 	<ul style="list-style-type: none"> All holes taken vertically in pits confined to lithological units. Specularite schist mineralisation has a general strike around due north depending on the location along the eastern thrust fault sampled. Mineralisation is generally steeply dipping to the east.
Diagrams	<ul style="list-style-type: none"> Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views. 	<ul style="list-style-type: none"> See Figures 3 and 4 attached

Criteria	JORC Code explanation	Commentary
Balanced reporting	<ul style="list-style-type: none"> Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results. 	<ul style="list-style-type: none"> All results have been reported
Other substantive exploration data	<ul style="list-style-type: none"> Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances. 	<ul style="list-style-type: none"> Significant aeromag data as well as pit and trench data north and south along strike of the areas sampled.
Further work	<ul style="list-style-type: none"> The nature and scale of planned further work (eg tests for lateral extensions or depth extensions or large-scale step-out drilling). Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive. 	<ul style="list-style-type: none"> Continued Reconnaissance mapping and sampling will continue to be followed up by drilling (RAB and RC) in due course

Appendix 1: Tenement Status

Tenement reference	Project & Location	Acquired interest during the quarter	Disposed interest during the quarter	Interest at the end of quarter
Marampa Project - EL 46A/2011	Lunsar - Sierra Leone	-	-	100%
Marampa Project - EL 46B/2011	Lunsar - Sierra Leone	-	-	100%
Rokel Project - EL 08/2012	Yaya – Sierra Leone	-	-	100%

Notes

- A - Completion of sale of 10% interest to Territory Minerals Ltd under agreement 17 October 2012
- B - Completion of August 2014 Caeneus Tenement Acquisition Agreement
- C - Completion of May 2013 Malaco Leichhardt Sale / Purchase Agreement

Appendix 5B

Mining exploration entity and oil and gas exploration entity quarterly report

Introduced 01/07/96 Origin Appendix 8 Amended 01/07/97, 01/07/98, 30/09/01, 01/06/10, 17/12/10, 01/05/2013

Name of entity

Cape Lambert Resources Limited

ABN

71 095 047 920

Quarter ended ("current quarter")

30 September 2014

Consolidated statement of cash flows

Cash flows related to operating activities	Current quarter \$A'000	Year to date (3 months) \$A'000
1.1 Receipts from product sales and related debtors	-	-
1.2 Payments for (a) exploration & evaluation	(4,594)	(4,594)
(b) development	-	-
(c) production	-	-
(d) administration	(3,461)	(3,461)
1.3 Dividends received	-	-
1.4 Interest and other items of a similar nature received	186	186
1.5 Interest and other costs of finance paid	-	-
1.6 Income taxes paid	(2,465)	(2,465)
1.7 Other (provide details if material)	97	97
Net Operating Cash Flows	(10,237)	(10,237)
Cash flows related to investing activities		
1.8 Payment for purchases of:		
(a) prospects	-	-
(b) equity investments	(239)	(239)
(c) other fixed assets	(52)	(52)
1.9 Proceeds from sale of:		
(a) prospects	51,504	51,504
(b) equity investments	49	49
(c) other fixed assets	-	-
(d) controlled entity	-	-
1.10 Loans to other entities	(200)	(200)
1.11 Loans repaid by other entities	325	325
1.12 Other: Payment for subscription to convertible notes	(250)	(250)
Other: Cash backing security for performance / other bonds & bank guarantees paid	(13)	(13)
Other: Payment of transaction related and business development costs	(2,423)	(2,423)
Net investing cash flows	48,701	48,701
1.13 Total operating and investing cash flows	38,464	38,464
Cash flows related to financing activities		
1.14 Proceeds from issues of shares, options, etc.	-	-

+ See chapter 19 for defined terms.

Appendix 5B

Mining exploration entity and oil and gas exploration entity quarterly report

1.15	Proceeds from sale of forfeited shares	-	-
1.16	Proceeds from borrowings	-	-
1.17	Repayment of borrowings	-	-
1.18	Dividends paid	-	-
1.19	Other: On-market buy back	(900)	(900)
	Net financing cash flows	(900)	(900)
	Net increase (decrease) in cash held	37,564	37,564
1.20	Cash at beginning of quarter/year to date	20,491	20,491
1.21	Exchange rate adjustments to item 1.20	52	52
1.22	Cash at end of quarter	58,107	58,107

Payments to directors of the entity, associates of the directors, related entities of the entity and associates of the related entities

		Current quarter \$A'000
1.23	Aggregate amount of payments to the parties included in item 1.2	1,080
1.24	Aggregate amount of loans to the parties included in item 1.10	-

1.25 Explanation necessary for an understanding of the transactions

\$250,000 (excluding GST) payment of executive and non-executive director fees and \$830,000 (excluding GST) payment of executive and non-executive director bonus payments as recommended by the Remuneration Committee, in respect of the MCC and ATO settlements.

Non-cash financing and investing activities

2.1 Details of financing and investing transactions which have had a material effect on consolidated assets and liabilities but did not involve cash flows

N/A

2.2 Details of outlays made by other entities to establish or increase their share in projects in which the reporting entity has an interest

N/A

+ See chapter 19 for defined terms.

Financing facilities available

Add notes as necessary for an understanding of the position.

	Amount available \$A'000	Amount used \$A'000
3.1 Loan facilities	-	-
3.2 Credit standby arrangements	-	-

Estimated cash outflows for next quarter

	\$A'000
4.1 Exploration and evaluation	3,500
4.2 Development	-
4.3 Production	-
4.4 Administration	1,500
Total	5,000

Reconciliation of cash

Reconciliation of cash at the end of the quarter (as shown in the consolidated statement of cash flows) to the related items in the accounts is as follows.	Current quarter \$A'000	Previous quarter \$A'000
5.1 Cash on hand and at bank	3,107	5,491
5.2 Deposits at call	55,000	15,000
5.3 Bank overdraft	-	-
5.4 Other (provide details)	-	-
Total: cash at end of quarter (item 1.22)	58,107	20,491

+ See chapter 19 for defined terms.

Appendix 5B

Mining exploration entity and oil and gas exploration entity quarterly report

Changes in interests in mining tenements and petroleum tenements

	Tenement reference and location	Nature of interest (note (2))	Interest at beginning of quarter	Interest at end of quarter
6.1	Interests in mining tenements and petroleum tenements relinquished, reduced or lapsed	EPM 9869 Sale agreement finalised	10%	-
6.2	Interests in mining tenements and petroleum tenements acquired or increased	EPM17449 EPM17904 EPM17907 EPM17910 Completion of August 2014 Caeneus Tenement Acquisition Agreement	- - - -	100% 100% 100% 100%
	ML90098 ML2504 ML2771 ML2773 Completion of May 2013 Malaco Leichhardt Sale / Purchase Agreement	- - - -	100% 100% 100% 100%	

Issued and quoted securities at end of current quarter

Description includes rate of interest and any redemption or conversion rights together with prices and dates.

	Total number	Number quoted	Issue price per security (see note 3) (cents)	Amount paid up per security (see note 3) (cents)
7.1	Preference securities	-	-	
7.2	<i>(description)</i> Changes during quarter (a) Increases through issues (b) Decreases through returns of capital, buy-backs, redemptions			
7.3	+Ordinary securities	626,686,586	626,686,586	
7.4	Changes during quarter (a) Increases through issues (b) Decreases through returns of capital, buy-backs	- (8,041,271)	- (8,041,271)	

+ See chapter 19 for defined terms.

Appendix 5B

Mining exploration entity and oil and gas exploration entity quarterly report

7.5	+Convertible debt securities <i>(description)</i>	-	-		
7.6	Changes during quarter (a) Increases through issues (b) Decreases through securities matured, converted				
7.7	Options <i>(description and conversion factor)</i>	500,000	500,000	<i>Exercise price \$0.15</i>	<i>Expiry date 30 Sept 2015</i>
7.8	Issued during quarter	-	-		
7.9	Exercised during quarter	-	-		
7.10	Expired during quarter	-	-		
7.11	Debentures <i>(totals only)</i>	-	-		
7.12	Unsecured notes <i>(totals only)</i>	-	-		

+ See chapter 19 for defined terms.

Compliance statement

- 1 This statement has been prepared under accounting policies which comply with accounting standards as defined in the Corporations Act or other standards acceptable to ASX (see note 5).

- 2 This statement does /does not* (*delete one*) give a true and fair view of the matters disclosed.

Notes

- 1 The quarterly report provides a basis for informing the market how the entity’s activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report.

- 2 The “Nature of interest” (items 6.1 and 6.2) includes options in respect of interests in mining tenements and petroleum tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement or petroleum tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.

- 3 **Issued and quoted securities** The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.

- 4 The definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report.

- 5 **Accounting Standards** ASX will accept, for example, the use of International Financial Reporting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.
