CORPORATE

Strategy and Business Model

Cape Lambert Resources Limited (**ASX: CFE**) (**Cape Lambert** or the **Company**) is an Australian domiciled, fully funded, mineral development company. Cape Lambert has interests in several exploration and mining companies, providing exposure to iron ore, copper, gold, uranium, manganese, lithium and lead-silver-zinc assets in Australia, Asia, Europe, Africa and South America (refer Figure 1).

Cape Lambert's strategy is to acquire and invest in undervalued and/or distressed mineral assets and companies (**Projects**) and:

- improve the value of these Projects, through a hands on approach to management, exploration, evaluation and development; and
- retain long-term exposure to these Projects through a production royalty and/or equity interest.

Cape Lambert aims to deliver Shareholder value by adding value to these undeveloped Projects. If Projects are converted into cash, the Company intends to follow a policy of distributing surplus cash to Shareholders.

Cash Balance

As at 31 December 2016, the Company had approximately A\$3.1 million (including FE Limited cash of A\$667k which is consolidated in accordance with accounting standards) in cash at bank.

Capital Management

African Minerals Limited Shareholding

The Company previously advised Shareholders that administrators had been appointed to manage the affairs, business and property of African Minerals Limited (**AML**). During the quarter, AML divested their shareholding and no longer hold any shares in Cape Lambert.

Issue of Options

On 15 December 2016, the Company issued 23,500,000 unlisted option at \$0.05 each expiring on 31 December 2018 to Gulf Energy International Limited.

Investments

Timis Mining Corporation Royalty

As previously announced, Cape Lambert will receive a royalty of US\$2 per tonne of iron concentrate (**Royalty**) exported from the Timis Marampa Iron Ore Mine (**Mine**), which is payable on a quarterly basis. The Royalty of US\$2 per tonne is payable on production of 24mt from the Mine.

There has been no change during the quarter and the Mine remains on care and maintenance however the Company does note the positive changes in the iron ore price during the period. The payment from Timis Mining to Cape Lambert of US\$2,566,420 for the

March 2015 quarter royalty also remains unpaid. The Company remains in contact with Timis Mining to expedite a resolution regarding the unpaid amount.

Timis Mining Corporation Bridging Finance

The Company provided Bridging finance of US\$8 million to Timis Mining which was repayable to the Company in October 2015 and incurs interest of 3 month US LIBOR (London interbank offered rate) + 6%. The principal and interest was due to be repaid to Cape Lambert in one payment on 21 October 2015 and could be extended by the parties on mutually agreed terms.

There has been no change during the quarter and repayment of the bridging finance is yet to be received by the Company. The Company remains in contact with Timis Mining to expedite a resolution regarding the facility.

European Lithium Limited

During the quarter European Lithium Limited (**ASX: EUR**) (**Euro Lithium**) announced a resource upgrade at its 100% owned Wolfsberg lithium project which is located in Carinthia, 270 kilometers south of Vienna, Austria (**Wolfsberg**). The Wolfsberg resource upgrade was the required milestone to trigger the issue of Tranche 2 Consideration Shares as part of the original acquisition of 100% of the issued capital of European Lithium AT (Investments) Limited, a wholly owned subsidiary of Euro Lithium. Consequently, the Company was issued with 16,370,980 shares in Euro Lithium on 23 December 2016 for nil consideration.

Following the issue of these shares, Cape Lambert owns 65,933,920 shares in Euro Lithium (15.26% of the issue capital in Euro Lithium). Based on the current Euro Lithium share price of \$0.064 the Company's investment in Euro Lithium is worth approximately A\$4.22 million.

Cauldron Energy Limited

The Company's shareholding in Cauldron Energy Limited (**ASX: CXU**) (**Cauldron**) decreased during the quarter from 18.21% to 16.36% following the issue of shares by Cauldron pursuant to a share placement. Based on the current Cauldron share price of \$0.07 the Company's investment in Cauldron is worth approximately A\$3.67 million.

Shareholder Meetings

Annual General Meeting

The Company's Annual General Meeting (**AGM**) was held 24 November 2016. For more information, refer to the Notice of AGM and results available via the Company's website.

General Meeting

The Company held a General Meeting (**GM**) on 29 December 2016 where the resolution to remove Tony Sage as Director of the Company was not passed. For more information, refer to the Notice of GM results available via the Company's website.

PROJECTS

Marampa (100% interest)

Marampa is an iron ore project at the development stage, and is located 90 km northeast of Freetown, Sierra Leone, West Africa (**Marampa** or **Marampa Project**) (refer Figure 2). Marampa comprises one granted mining licence (ML05/2014) comprising 79.40km² and two granted exploration licences (EL46A/2011 – 159.78 km² and EL46B/2011 – 66.00km² (formerly EL46/2011 – 305.18km²)) held by Marampa Iron Ore (SL) Limited, which is indirectly, a wholly owned subsidiary of Cape Lambert.

The Marampa Project remains under care and maintenance and the Company surrendered its exploration licence EL46B/2011 late in the quarter.

Dempsey Resources (100% interest)

Dempsey Resources holds the Kukuna Iron Ore Project located in Sierra Leone (**Kukuna** or **Kukuna Project**).

The Project is located 120 km northeast of Freetown in the northwest of Sierra Leone and consists of one exploration licence (EL22/2012) covering 68km² (refer Figure 2). The licence is located 70km due north of the Marampa Project and the Pepel Infrastructure and comprises rocks that correlate with the Marampa Group stratigraphy known to host specular hematite mineralisation.

The Kukuna Project remains under care and maintenance.

Metal Exploration Limited (100% interest)

Metal Exploration (Mauritius) Limited, a wholly owned subsidiary of Cape Lambert, holds 15 granted exploration licences and one application in Sierra Leone covering approximately 1,688km² (refer Figure 2). This land package covered the region 70km to the north and south of Marampa and is referred to as the Rokel Iron Ore Project (**Rokel** or **Rokel Project**).

The Company surrendered all the exploration licences associated with the Rokel Project late in the quarter.

Cote D'Ivoire (100% interest)

Metals Exploration Cote D'Ivoire SA Limited is a wholly owned subsidiary of Cape Lambert Resources. The Company holds three tenements in the highly prospective Birimian Gold Belt of Cote D'Ivoire. The tenements are named Boundiali North (400km²), Katiola (400km²) and Bouake (400km²) for a total land position of 1,200km² (**Tenements**).

The Company announced during the March 2016 quarter (refer to ASX announcement of 23 March 2016) that it had executed a sale and purchase agreement with a subsidiary of Newcrest Mining Limited (Newcrest) for the sale of its Tenements.

The Sale remains subject to Newcrest receiving approval from the Minister of Mines for the transfer of the Licences, which is pending the renewal of the tenements to occur. The Company now expects the tenement renewals to be granted in the March 2017 quarter.

Mining International Pty Ltd (100% Interest)

Mining International Pty Ltd (**Mining International**), is a wholly owned subsidiary of Cape Lambert. The Company holds tenure to 4 mining leases (which were excluded from the sale of the Leichhardt Copper Project) and 4 granted exploration permits for minerals (EPM's) at the Wee MacGregor Project located 40 km southeast of Mt Isa in Queensland (refer Figure 3).

The tenements are located within in the Eastern Fold Belt of the Mt Isa inlier. The eastern-most tenements are located in the Mary Kathleen Zone/Wonga Subprovince. The western group of tenements are located in the Kalkadoon Leichhardt Belt. These areas are prospective for a variety of deposit types, most notably structurally controlled epigenetic copper and gold deposits.

The Wee MacGregor tenements can be classed as brownfields exploration as several copper occurrences and historical workings occur within the tenement boundaries. In addition, there are numerous under-explored geochemical and geophysical anomalies defined by previous explorers.

Following the Farm-in agreement executed with Firebird Pty Ltd (**Firebird**) during the September 2016 quarter, in regards to the Lady Ethleen project (ML2773), Firebird subsequently conducted a small amount of Rotary Air Blast (RAB) drilling totaling 10 holes to a maximum depth of 54m in and around the historic mine void (refer Figure 4). Firebird also commissioned a topographic survey of the project area.

No samples were submitted for conventional assay however grade indications for copper only were obtained with a Niton hand held XRF analyser. All samples were analyzed three times in three different areas of the sample with the resultant average deemed to indicate the sample grade. There were some significant intersections with indicative grades as high as 8.7% Cu from 26m to 27m.

A list of all handheld XRF results is included in Table 1.

Competent Person:

The contents of this Report relating to Exploration Results and Mineral Resources are based on information compiled by Olaf Frederickson, a Member of the Australasian Institute of Mining and Metallurgy. Mr Frederickson is a consultant to Cape Lambert and has sufficient experience relevant to the style of mineralisation and the deposit under consideration and to the activity he is undertaking to qualify as a Competent Person, as defined in the 2012 edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Mr Frederickson consents to the inclusion in this report of the matters compiled by him in the form and context in which they appear.

* pending transfer to a subsidiary of Newcrest Mining Limited

There were no mining tenements with beneficial interest earned/lost in farm-in/farm-out agreements at the end of the quarter.

JORC Code, 2012 Edition – Table 1 Lady Ethleen

Section 1 Sampling Techniques and Data

(Criteria in this section apply to all succeeding sections.)

Criteria	JORC Code explanation	Commentary
Sampling techniques	<ul style="list-style-type: none"> Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling. Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used. Aspects of the determination of mineralisation that are Material to the Public Report. In cases where 'industry standard' work has been done this would be relatively simple (eg 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information. 	<ul style="list-style-type: none"> Rotary Air Blast (RAB) drilling was used to obtain samples on 1m intervals. Samples were taken at the end of each meter drilled with a shovel directly from the cuttings pile around the collar of the hole. Approximately a three quarter filled 10 liter bucket of sample was taken and passed through a riffle splitter to reduce the size. Final samples were collected in calico bags. Remaining drill cuttings around the collar were then removed prior to the next meter being drilled. Samples were analysed in the field with a Niton handheld XRF gun. Three readings were taken through the calico bags for each sample and the average taken to be the accepted indicated grade.
Drilling techniques	<ul style="list-style-type: none"> Drill type (eg core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (eg core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc). 	<ul style="list-style-type: none"> Approximately 6 inch rotary air blast drilling was used.
Drill sample recovery	<ul style="list-style-type: none"> Method of recording and assessing core and chip sample recoveries and results assessed. Measures taken to maximise sample recovery and ensure representative nature of the samples. Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material. 	<ul style="list-style-type: none"> Holes were drilled and sampled meter by meter with a pause between each meter for sampling. Holes were cleaned each meter and all excess cuttings were removed from around the collar after samples were taken for each meter.

Criteria	JORC Code explanation	Commentary
Logging	<ul style="list-style-type: none"> Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies. Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography. The total length and percentage of the relevant intersections logged. 	<ul style="list-style-type: none"> Chip samples were logged in a preliminary fashion, ie identifying visible copper mineralization, quartz content etc. Logging was qualitative and conducted on each meter.
Sub-sampling techniques and sample preparation	<ul style="list-style-type: none"> If core, whether cut or sawn and whether quarter, half or all core taken. If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry. For all sample types, the nature, quality and appropriateness of the sample preparation technique. Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples. Measures taken to ensure that the sampling is representative of the in situ material collected, including for instance results for field duplicate/second-half sampling. Whether sample sizes are appropriate to the grain size of the material being sampled. 	<ul style="list-style-type: none"> All samples were dry and passed through a riffle splitter for volume reduction.
Quality of assay data and laboratory tests	<ul style="list-style-type: none"> The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total. For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc. Nature of quality control procedures adopted (eg standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (ie lack of bias) and precision have been established. 	<ul style="list-style-type: none"> Samples were not assayed in a lab. Indicative grades were obtained with the use of a Niton handheld XRF gun. Three readings were taken through the calico bags for each sample and the average taken to be the accepted indicated grade.
Verification of sampling and assaying	<ul style="list-style-type: none"> The verification of significant intersections by either independent or alternative company personnel. The use of twinned holes. Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols. Discuss any adjustment to assay data. 	<ul style="list-style-type: none"> No verification work has been conducted.
Location of data points	<ul style="list-style-type: none"> Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation. Specification of the grid system used. 	<ul style="list-style-type: none"> Drillholes were located with handheld GPS.

Criteria	JORC Code explanation	Commentary
	<ul style="list-style-type: none"> Quality and adequacy of topographic control. 	
Data spacing and distribution	<ul style="list-style-type: none"> Data spacing for reporting of Exploration Results. Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied. Whether sample compositing has been applied. 	<ul style="list-style-type: none"> Drillholes were on an irregular grid and orientation designed to intersect a curved and dipping mineralized body. Holes were designed to verify historic data and provide some infill information. The data is not suitable for resource estimation above the level of inferred. No sample compositing was done.
Orientation of data in relation to geological structure	<ul style="list-style-type: none"> Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type. If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material. 	<ul style="list-style-type: none"> Drillholes were on an irregular grid and orientation designed to intersect a curved and dipping mineralized body.
Sample security	<ul style="list-style-type: none"> The measures taken to ensure sample security. 	<ul style="list-style-type: none"> Sample chain of custody was maintained by the geologist throughout delivery to their place of storage.
Audits or reviews	<ul style="list-style-type: none"> The results of any audits or reviews of sampling techniques and data. 	<ul style="list-style-type: none"> No audits or reviews have been done.

Section 2 Reporting of Exploration Results

(Criteria listed in the preceding section also apply to this section.)

Criteria	JORC Code explanation	Commentary
Mineral tenement and land tenure status	<ul style="list-style-type: none"> Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings. The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area. 	<ul style="list-style-type: none"> Work was conducted on ML 2773 in Mount Isa district of northwestern Queensland. The tenement is held by Mining International Pty Ltd and is the subject of a farm in agreement with Firebird Minerals Pty Ltd. The tenure is a mining licence, has an environmental authority, and a native title and heritage agreement with the Kalkadoon people.
Exploration done by	<ul style="list-style-type: none"> Acknowledgment and appraisal of exploration by other parties. 	<ul style="list-style-type: none"> There has been some historic exploration some dating back to early 1900's by a number of companies such as

Criteria	JORC Code explanation	Commentary
<i>other parties</i>		Carpentaria Exploration.
Geology	<ul style="list-style-type: none"> • <i>Deposit type, geological setting and style of mineralisation.</i> 	<ul style="list-style-type: none"> • On eschelon shear hosted copper lode bounded by a massive quartz hanging wall within a weathered amphibolite host.
Drill hole Information	<ul style="list-style-type: none"> • <i>A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes:</i> <ul style="list-style-type: none"> ○ <i>easting and northing of the drill hole collar</i> ○ <i>elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar</i> ○ <i>dip and azimuth of the hole</i> ○ <i>down hole length and interception depth</i> ○ <i>hole length.</i> • <i>If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.</i> 	<ul style="list-style-type: none"> • See attached table.
Data aggregation methods	<ul style="list-style-type: none"> • <i>In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually Material and should be stated.</i> • <i>Where aggregate intercepts incorporate short lengths of high grade results and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.</i> • <i>The assumptions used for any reporting of metal equivalent values should be clearly stated.</i> 	<ul style="list-style-type: none"> • The indicative assay results are the average of three readings from different parts of the sample.
Relationship between mineralisation widths and intercept lengths	<ul style="list-style-type: none"> • <i>These relationships are particularly important in the reporting of Exploration Results.</i> • <i>If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported.</i> • <i>If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (eg ‘down hole length, true width not known’).</i> 	<ul style="list-style-type: none"> • Down hole length and true width un-certain.
Diagrams	<ul style="list-style-type: none"> • <i>Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.</i> 	<ul style="list-style-type: none"> • See attached location plan.

Criteria	JORC Code explanation	Commentary
<i>Balanced reporting</i>	<ul style="list-style-type: none"> Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results. 	<ul style="list-style-type: none"> All results have been reported
<i>Other substantive exploration data</i>	<ul style="list-style-type: none"> Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances. 	<ul style="list-style-type: none"> N/A
<i>Further work</i>	<ul style="list-style-type: none"> The nature and scale of planned further work (eg tests for lateral extensions or depth extensions or large-scale step-out drilling). Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive. 	<ul style="list-style-type: none"> Further infill drilling may be conducted if deemed necessary.

Quarter ended ("current quarter")

31 December 2016

Consolidated statement of cash flows	Current quarter \$A'000	Year to date (6 months) \$A'000
1. Cash flows from operating activities		
1.1 Receipts from customers	-	-
1.2 Payments for		
(a) exploration & evaluation	(640)	(1,285)
(b) development	-	-
(c) production	-	-
(d) staff costs	(78)	(161)
(e) administration and corporate costs	(841)	(1,834)
1.3 Dividends received (see note 3)	-	-
1.4 Interest received	11	25
1.5 Interest and other costs of finance paid	-	-
1.6 Income taxes paid	-	-
1.7 Research and development refunds	-	-
1.8 Other (FEL: Recovery of reverse-takeover transaction costs)	100	100
1.9 Net cash from / (used in) operating activities	(1,448)	(3,155)

2. Cash flows from investing activities		
2.1 Payments to acquire:		
(a) property, plant and equipment	-	-
(b) tenements (see item 10)	-	-
(c) investments	(38)	(280)

Consolidated statement of cash flows	Current quarter \$A'000	Year to date (6 months) \$A'000
(d) other non-current assets	-	-
2.2 Proceeds from the disposal of:		
(a) property, plant and equipment	8	41
(b) tenements (see item 10)	-	-
(c) investments	99	335
(d) other non-current assets	-	-
2.3 Cash flows from loans to other entities	-	-
2.4 Dividends received (see note 3)	-	-
2.5 Other (provide details if material)	-	-
2.6 Net cash from / (used in) investing activities	69	96

3. Cash flows from financing activities		
3.1 Proceeds from issues of shares	700	700
3.2 Proceeds from issue of convertible notes	-	-
3.3 Proceeds from exercise of share options	-	-
3.4 Transaction costs related to issues of shares, convertible notes or options	(38)	(38)
3.5 Proceeds from borrowings	-	-
3.6 Repayment of borrowings	-	-
3.7 Transaction costs related to loans and borrowings	-	-
3.8 Dividends paid	-	-
3.9 Other (provide details if material)	(66)	(66)
3.10 Net cash from / (used in) financing activities	596	596

4. Net increase / (decrease) in cash and cash equivalents for the period	(783)	(2,463)
4.1 Cash and cash equivalents at beginning of period	3,936	5,615
4.2 Net cash from / (used in) operating activities (item 1.9 above)	(1,448)	(3,155)

Mining exploration entity and oil and gas exploration entity quarterly report

Consolidated statement of cash flows		Current quarter \$A'000	Year to date (6 months) \$A'000
4.3	Net cash from / (used in) investing activities (item 2.6 above)	69	96
4.4	Net cash from / (used in) financing activities (item 3.10 above)	596	596
4.5	Effect of movement in exchange rates on cash held	(34)	(33)

Notes

1. The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity that wishes to disclose additional information is encouraged to do so, in a note or notes included in or attached to this report.
2. If this quarterly report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
